Homework 2
Due: 11:59 pm Nov 16

In this homework, we learn how to use generative adversarial network (GAN) to generate painting images. First, implement a GAN model. Then, take the painting image dataset from `https://www.kaggle.com/datasets/steubk/wikiart` and train a GAN model on it. Use the trained GAN to generate painting images, and write a report (2 pages, NeurIPS format). In the report, you can include the following: 1) hyperparameter settings; 2) training loss curves; 3) Inception score and FID score of generated images, using code from `https://pytorch-ignite.ai/blog/gan-evaluation-with-fid-and-is/` 4) examples of generated images. Submit the report to Gradescope.
